

Assignment on ASP.NET MVC Core

Objective: Develop an ASP.NET Core MVC application to manage two data tables: Employee and Admin. The application should allow for CRUD operations on both tables.

Requirements:

Database Tables:

1. Employee Table:

- Id (Primary Key, int, Auto-increment)
- FirstName (nvarchar(100))
- LastName (nvarchar(100))
- Position (nvarchar(100))
- Salary (decimal)

2. Admin Table:

- AdminId (Primary Key, int, Auto-increment)
- Username (nvarchar(100))
- Password (nvarchar(100))
- Email (nvarchar(100))

Functional Requirements:

1. Employee Management:

- Implement CRUD operations for the Employee table.
- Provide a list view to display all employees.
- Enable creation, editing of employee records.

2. Authentication:

- Implement basic authentication using the Admin table.
- Only authenticated admins should have access to the application features.

Validation Requirements:

- Ensure that all required fields are validated.
- Salary for employees must be a positive number.
- Email for admins should be a valid email format.

User Interface:

- Create separate views for managing employees.
- Ensure the UI is user-friendly and intuitive.
